SECTION 'C'

TECHNICAL SPECIFICATIONS OF STORES AND DRAWINGS

Application Note

The pulsating DC power source of 125A with auxiliary power supply will be used to generate plasma in the plasma nitriding system, which is used as job shop.

During the plasma nitriding process, arcing is observed initially on the components due to the dust particles present on it. The arcing has to be suppressed so that if the plasma goes to the arc mode, it may damage the components. Hence, active arc suppression should be provided in the power supply. As mentioned in the specification, the power source will be tested on plasma load. A typical plasma load behavior [Characteristics] can be interpreted from the following voltage and current wave forms (as shown below) taken during plasma nitriding process.

Specifications of Pulsating DC Power Source with auxiliary power supply

Sr. No.	Parameter	Specification	
110.			
A	Specifications of Pulsed DC power supply		
1	Input Parameters		
-	Input Voltage	3-Phase, 415V ±10% AC	
	Input Frequency	50Hz,+/- 1 Hz	
	Input connections	5 wire (R,Y,B,N and Earth)	
2	Output Parameters	5 wife (K, 1, b, N and Earth)	
	Voltage		
	Output voltage polarity	Pulsed DC negative output (pulsed between zero	
	output voltage polarity	and negative peak).	
		Important: The positive output of the power	
		supply to be grounded.	
	Peak output voltage	1000 V max.	
	The state of the s	(Settable between -20V(or less, kindly specify)	
		to -1000V)	
	Voltage setting	Better than 1V	
	resolution		
	Voltage ripple	0.1% or better (at maximum rated values)	
	Voltage regulation	0.1% or better (at maximum rated values)	
	Current	,	
	Output current	125A [Peak] at 80% Duty Cycle	
	Frequency	, ,	
	Pulse frequency	Settable between 10 KHz to 30 KHz [in the step of	
		1KHz or better]	
	Duty cycle		
	Pulse duty cycle	Settable between 10% to 80% [in the step of 1%]	
		or better]	
3	Protections		
(a)	Arc current suppression	Power supply should be able to withstand arcing	
		events during plasma load condition	
(b)	Output short circuit	Power supply must trip in the event of a load	
		short circuit condition.	
(c)	Output over voltage	Power supply must trip if output voltage exceeds	
		maximum rated voltage.	
4	Output load	The final pulsed DC output will be connected to	
		a plasma load.	
		-The power supply must satisfactorily work in	
		this configuration i. e. plasma load	
	Enough Domest In the action	and Controls	
5	Front Panel Indications		
	Mains on/off	Suitable MCCB must be provided.	

	Ctout/ston	Duch hytton avritaless for marron avently start/stan
	Start/stop	Push button switches for power supply start/stop
	Trip display	Indication Lamp (For all different trips)
	Trip reset	Push button switch
	Output voltage control	A 10 turn pot control must be provided on front
		panel
	Output voltage display	Voltage display (digital) must be provided on
		front panel with 0.1% or better accuracy
	Output current display	Current display (digital) must be provided on
		front panel with 0.1% or better accuracy
	Output frequency	A 10 turn pot control must be provided on front
	control	panel
	Output frequency	Frequency display (digital) must be provided on
	display	front panel with 0.1% or better accuracy for full
		range of duty cycle i.e. 10% to 80%
	Output duty cycle	A 10 turn pot control must be provided on front
	control	panel
	Output duty cycle	Duty cycle display (digital) must be provided on
	display	front panel with 0.1% or better accuracy
	Timer display(digital)	Total time and elapsed time display
	Temperature Temperature	Temperature should be displayed on the front
	measurement display	panel in Degree centigrade. The thermocouple
	incusurement display	used will be grounded "J" type floating at high
		voltage (maximum -1000V pulsating DC).
6	Duty of operation	Continuous duty (24 x 7 continuous operation)
7	Interlocks	Continuous duty (2+ x / continuous operation)

The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly
		100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before
Q	Grounding	100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before starting the power supply.
8	Grounding Input/output Termination	100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before starting the power supply. ons
8	Grounding	100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before starting the power supply. ons Input and Output – Screw terminal blocks with
	Grounding Input/output Terminations	100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before starting the power supply. ons Input and Output – Screw terminal blocks with proper nomenclature
9	Grounding Input/output Termination Terminations Cooling System	100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before starting the power supply. ons Input and Output – Screw terminal blocks with
	Grounding Input/output Termination Terminations Cooling System Environment	100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before starting the power supply. ons Input and Output – Screw terminal blocks with proper nomenclature Forced air-cooling.
9 10	Grounding Input/output Termination Terminations Cooling System Environment Ambient temperature	100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before starting the power supply. ons Input and Output – Screw terminal blocks with proper nomenclature
9	Grounding Input/output Termination Terminations Cooling System Environment Ambient temperature Enclosure	100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before starting the power supply. ons Input and Output – Screw terminal blocks with proper nomenclature Forced air-cooling.
9 10	Grounding Input/output Termination Terminations Cooling System Environment Ambient temperature	100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before starting the power supply. ons Input and Output – Screw terminal blocks with proper nomenclature Forced air-cooling. 0 to 50°C Suitable powder coated MS structure with lifting
9 10	Grounding Input/output Termination Terminations Cooling System Environment Ambient temperature Enclosure Type	100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before starting the power supply. Ons Input and Output – Screw terminal blocks with proper nomenclature Forced air-cooling. 0 to 50°C Suitable powder coated MS structure with lifting lugs and non-metallic wheels
9 10	Grounding Input/output Termination Terminations Cooling System Environment Ambient temperature Enclosure	100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before starting the power supply. ons Input and Output – Screw terminal blocks with proper nomenclature Forced air-cooling. 0 to 50°C Suitable powder coated MS structure with lifting lugs and non-metallic wheels IP20 (vender has to provide IP20 test results
9 10 11	Grounding Input/output Termination Terminations Cooling System Environment Ambient temperature Enclosure Type Ingress Protection class	100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before starting the power supply. ons Input and Output – Screw terminal blocks with proper nomenclature Forced air-cooling. 0 to 50°C Suitable powder coated MS structure with lifting lugs and non-metallic wheels IP20 (vender has to provide IP20 test results reports for the enclosure)
9 10	Grounding Input/output Termination Terminations Cooling System Environment Ambient temperature Enclosure Type	100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before starting the power supply. ons Input and Output – Screw terminal blocks with proper nomenclature Forced air-cooling. 0 to 50°C Suitable powder coated MS structure with lifting lugs and non-metallic wheels IP20 (vender has to provide IP20 test results reports for the enclosure) A hardcopy of the operational and maintenance
9 10 11	Grounding Input/output Termination Terminations Cooling System Environment Ambient temperature Enclosure Type Ingress Protection class Operating Manual	100 hours timer must be provided to set process time and it should be interlocked with the pulsed power supply. The pulsed power supply must switched off automatically after the completion of process time cycle. An interlock must be provided which should indicates that the chamber has been properly connected with ground connection before starting the power supply. ons Input and Output – Screw terminal blocks with proper nomenclature Forced air-cooling. 0 to 50°C Suitable powder coated MS structure with lifting lugs and non-metallic wheels IP20 (vender has to provide IP20 test results reports for the enclosure)

1	Input voltage	230VAC, 50Hz
2	Output voltage	-700V DC
3	Output current	1 A DC
4	Control	Auxiliary On/Off switch with indication to be provided on front panel
5	Output polarity	Negative DC output. The positive output of this
	Output polarity	power supply to be grounded
		Transfer January
C 1	Acceptance Criteria	
1	Pre dispatch	The performance of the pulsed power supply has
	inspection	to be demonstrated on resistive load at vendor's
	_	premises. The vendor has to make all necessary
		arrangements (resistive load, input power etc.)
		for pre dispatch inspection and testing at full
		rated values.
2	Final acceptance	The vendor has to install the power supply at
		FCIPT,IPR and demonstrate the satisfactory
		working at full ratings on plasma load.
D	Installation and	To be done by vendor of cost at FCIPT,
	commissioning	Gandhinagar
		Sandimagai
